I love optical illusions. I have seen most of them, but [this one](#) is RIDICULOUS!

How weird. Is it a curveball thing or a computer thing?

by [taylor-made](#) on May. 24, 2009 at 12:13 PM

Whoa!! That's cool...

by [LovemyQ](#) on May. 24, 2009 at 1:55 PM

I bookmarked the page to see all the illusions. How wild that the players actually have to figure out an optical illusion to hit the ball correctly. That would be hard to compensate for.

Well....actually a curve ball isn't an optical illusion. The spin of the ball actually physically makes the ball curve. One side of the ball is moving the speed of the pitch plus the spin and the other side of the ball is moving the speed of the pitch minus the spin so that makes the ball pull to one side (my son pitches...that's the only reason I know).

And the optical illusion here is really cool, genypher. I love these things.
